cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is a from the genue Rusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                                                                                                                                            59

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Fusarium. The nematode is from the genus heteroderar. The polymucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.

           nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus Pusarium. The nematode is from the genus plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.

                                                                                   enhancing
The invention relates to chitinase polypeptides and the polynucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                                                                                                                                                                                                                                                                                           BIGHFCY1SEINKSNAYCDPTKRQWPCAAGQKYYGRGPLQISWNYNYGPAGRDIGFNGLA

       The invention relates to chitinase polypeptides and the polynucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                                                                                                                                                                                                                                                       9

                    The invention relates to chitinase polypeptides and the polymucleotides encoding them. A method of enhancing plant resistance to a fungus or mematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus Heterodera. The polymucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                                                                                                                                                                                                                                                9

```

```
The invention relates to chitinase polypeptides and the polymucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The Hungus is from the genue Pusarium. The nematode is from the genue Heterodera. The polymucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                     Claim 3; SEQ ID NO 44; 197pp; English.

/note="Vector: Bluescript SK+/XhoI-EcoRI; Site 1: EcoRI; Site 2: XhoI; Field-grown corn was silk channel-inoculated in the morrhing (~10 am) with 1 ml of a macroconidial suspension (500,000 spores/ml) of Fusarium graminearum and silk channels were collected and immediately frozen in liquid nitrogen 6 hours later. RNA was extracted from silk tissue between 1 cm below and above the inoculation point in the silk channel, RNA from five silk channels was pooled."

This is a Gateway compactible vector, permitting clone movement to new vector backbones for expression in diverse host cells using recombination rather than restriction enzymes. Details of the vector and sequencing primers are available at ZmDB in the EST library description tables. poly(A) + mRNA was prepared by Invitrogen, and equimolis a good to selection of mRNA with a 5' cap. After synthesis of cDNA, a normalization step was conducted against the mixture of RNA sources. This step effected a 20% to 80% reduction in common transcript types. Tissues prepared: 1. just emerging silks; 2. inner husks from ears of sample #1; 3. 20 dap aleurone; 4. immature tassels, stages from 1-2 mm to 1-2 cm; 5. 2 mm to 2 cm ears; 6. pollen; 7. 1 cm vegetative shoot tips from 15 day old seedlings; all leaves with an expanded or partially expanded sheath were removed; 8. mature leaf tissue; 9. 0.5 cm long root tips from 15 day old seedlings; 10. 10 dap whole seed; 11. day endosperm and embryo; 12. 17 day endosperm and embryo; 13. 19 day endosperm and embryo; 14. 19 day endosperm and embryo; 15. 17 day endosperm and embryo; 12. 17 day endosperm day endosperm endosperm endospe

Inbrary was prepared by George Rudenko using poly (A) library was prepared by George Rudenko using poly (A) selected RNA and Universal Riboclone cDNA Synthesis System (Promega). CDNA was synthesized using both random and oligo(dT) primers in separate reactions and equipped with EcoRI adaptors. Library was size-fractionated on agarose gels (for insert size >400mp) and non-directionally cloned into EcoRI-dispersed pulcil y ector. Blue/white selection on carbenicillin-containing plates was used to recover
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  385
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ď
                                                                                                                                                                                                                                                                                                                                                                                    Intrary was prepared by George Rudenko using poly (A) elected RNA and Universal Ribochone CDNA Synthesis System (Promega). CDNA was synthesized using both random and oligo (dT) primers in separate reactions and equipped with EcoRI adaptors. Library was size-fractionated on agarose gels (for insert size >4000pb) and non-directionally cloned into EcoRI-digested pUC19 vector. Blue/white selection on carbenicillin-containing plates was used to recover

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
